

Are you ready to put those books to work?

The Department of Education works with other Arts and Sciences Departments in the College to provide breadth and depth of content and pedagogical knowledge in our teacher education programs.

The mission of our teacher education programs is to produce intentional teachers who:

- are able to research, analyze and synthesize new information/points of view;
- practice and acquire new skills;
- are able to use that knowledge and those skills to teach;
- reflect on and improve their own practice for the benefit of K-12 students.

The core teaching beliefs of the Department of Education faculty – for ourselves, our students and their K-12 students:

- High expectations drive achievement.
- Each individual possesses unique talents that must be developed.
- Teaching is a profession that demands specific knowledge, skills and dispositions.
- Learning is an active, life-long process.
- Instruction must be student-centered, challenging, and tied to assessment.
- Assessment must be used to improve instruction and foster individual growth.
- Teachers must advance equity and justice.

With these beliefs as a foundation the Department of Education faculty, in collaboration with our arts and sciences colleagues, have built teacher education programs at William Jewell College that seek to assist the student in the development of personal characteristics for responsible citizenship and effective professional teaching competence.

Distinctives

The Education Department at Jewell is designed to give students “hands-on” experiences early in their college careers. Students begin clinical field experiences in classrooms early, in either their first or second year. With downtown Kansas City only twenty minutes away, field experiences are in diverse urban, rural, and suburban settings, giving future teachers a broad spectrum of experiences.

Future educators will not only be well prepared to teach, they will be prepared to address the needs of a field that is ever-changing. Other educational distinctives:

- The opportunity for teacher education students to study and teach abroad through the British Teacher Education program.
- William Jewell College has been certifying teachers for the State of Missouri since 1914 and has held membership in the American Association of Colleges of Teacher Education since 1959.
- Use of the Teacher Work Sample by WJC student teachers to demonstrate that they have produced learning gains in their students.
- Teachers prepared at WJC quickly assume leadership roles in schools. Many go on to become school administrators or master teachers. Several have achieved the prestigious

National Board for Professional Teaching Certification or have become Missouri STARR teachers.

- William Jewell teacher education programs have been approved by the Missouri State Board of Education in the following fields:

- Elementary education 1-6
- Biology 9-12
- Art K-12
- Chemistry 9-12
- French K-12
- Physics 9-12
- Spanish K-12
- English **5-9, 9-12
- Instrumental Music K-12
- Mathematics **5-9, 9-12
- Vocal Music K-12
- Science **5-9, 9-12
- Social Studies **5-9, 9-12
- Physical Education 9-12
- Speech and Theatre 9-12

Successful completion of any of these programs of study leads to Missouri teacher certification in that field/grade level. Middle school certification (grades 5-9**) is available only as a second field of certification which must be added to a full teacher education program; also, required middle school courses are offered during even summers only.
