Sept. 17, 2021

Faculty, Staff and Students,

**Operation Resurgent Campus Update**

The current ORC Level is A-2.

The College has reached an 86% completed vaccination rate while the exemption rate has decreased below 11%.

If you completed your second dose of the vaccine in August or September after submitting your Health History and Immunization Form to the Student Health Center, please send an updated vaccination record card to the Student Health Center (if you have not already done so) via etrieve so that records can be updated. Approximately 1% need to report a second dose and less than 2% of records are pending supporting documentation.

Zero positive cases were reported this week out of 51 tests administered and reported. It is important to note that students are being seen and treated for symptoms and other non-COVID illnesses in the Student Health Center.

One individual is in isolation through Sunday.

**Point of Clarification**

Students who are experiencing symptoms or who have been notified as being a close contact from an off-campus authority (e.g. local health department) should contact the Student Health Center for directives as soon as possible. The Student Health Center will notify faculty of any necessary quarantine for students so that appropriate accommodations can be arranged between the student and faculty.

Employees should coordinate with their supervisor and notify HR of a quarantine or positive test result and required isolation.

**White House Announcement**

As mentioned in last week’s update, the College will comply with the executive order for unvaccinated employee weekly testing requirements. More information will be released next week by Human Resources.

**Daniel Holt**
